**Agency for Defense Development (ADD)**

Researcher (PI: Dr. Sin Hyuk Yim, Dr. Sangkyung Lee)

Daejeon, South Korea

Jun. 2024 – Present

- Designed and implemented absorption spectroscopy setups for alkali vapor cells and performed theoretical modeling of spectral line shapes.
- Developed software tools for estimating buffer gas pressure and monitoring alkali atom number density from measured spectra.
- Conducted long-term aging tests on cubic glass Rb vapor cells and experimentally verified the lifetime improvement provided by  $\text{Al}_2\text{O}_3$  wall coatings.
- Implemented a SERF-regime OPM setup and performed Bloch-equation-based modeling to analyze the expected magnetic response and operational parameters.
- Established environmental monitoring systems—vacuum and temperature—and designed mechanical mounts.
